## FOR IMMEDIATE RELEASE

### VIBRAC ANNOUNCES LAUNCH OF THE NEW **TEST-ALL II™** **TORQUE TOOL CALIBRATOR**

Amherst, NH, USA – Vibrac LLC, a worldwide leader in the manufacture of torque test systems, announced today that they will be releasing a new generation of torque tool calibration systems in March 2012, under the product name “Test-All II Torque Tool Calibrator”. This new line of torque measuring systems is designed to be more “user friendly” and features a large color touch-screen and new easy-to-use windows based operating system.

The Test-All II Torque Tool Calibrator system, which is the next generation of the successful and well-known Test-All system, has a smaller footprint and completely updated electronic control system.

“The Torque Tool Calibrator is the future of torque testing”, said Robert Searle, Vice President of Research and Development with Vibrac, and the designer of the system. “With this system, it is now much easier for torque wrench and screw driver operators to program and select their test options, complete their tests, and manage the data. The system also features live data displayed numerically and graphically...as the test is being performed.”

The Torque Tool Calibrator system has many new features, including virtually an unlimited array of tool testing options to accommodate any torque tool, such as a torque wrench or screw driver, availability of oz-in or in-lb, and provides PC connectivity, printer options, data analysis software, field calibration kit, programming key lockout, and selectable test reports.

For more information on the Test-All II system, please contact us at [sales@vibrac.com](mailto:sales@vibrac.com), or call us directly at +1.603.882.6777.
